

Clipboard management

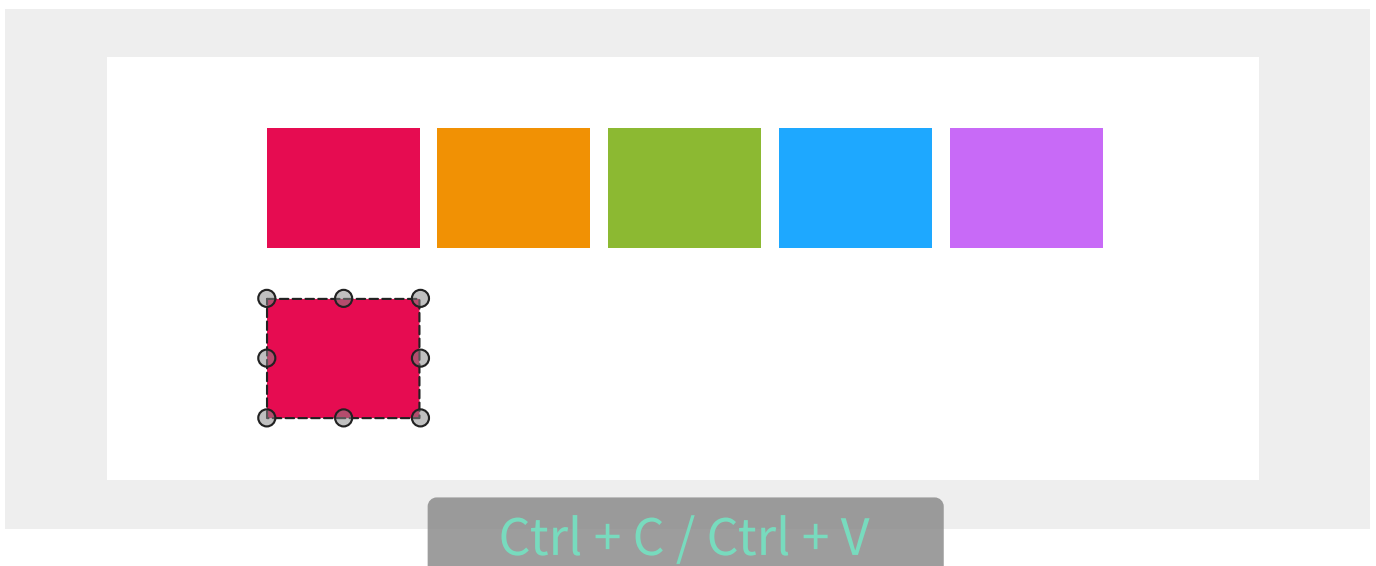

When you are creating and designing new concepts on your canvas maybe you need to reutilize some elements from your design. Of course you can use the standard copy & paste but sometimes it's not enough.

At UXBOX you have the clipboard management feature that allows you to choose between the last 5 elements you saved to your clipboard and reuse them into your designs in the order you want.

Standard Copy & Paste

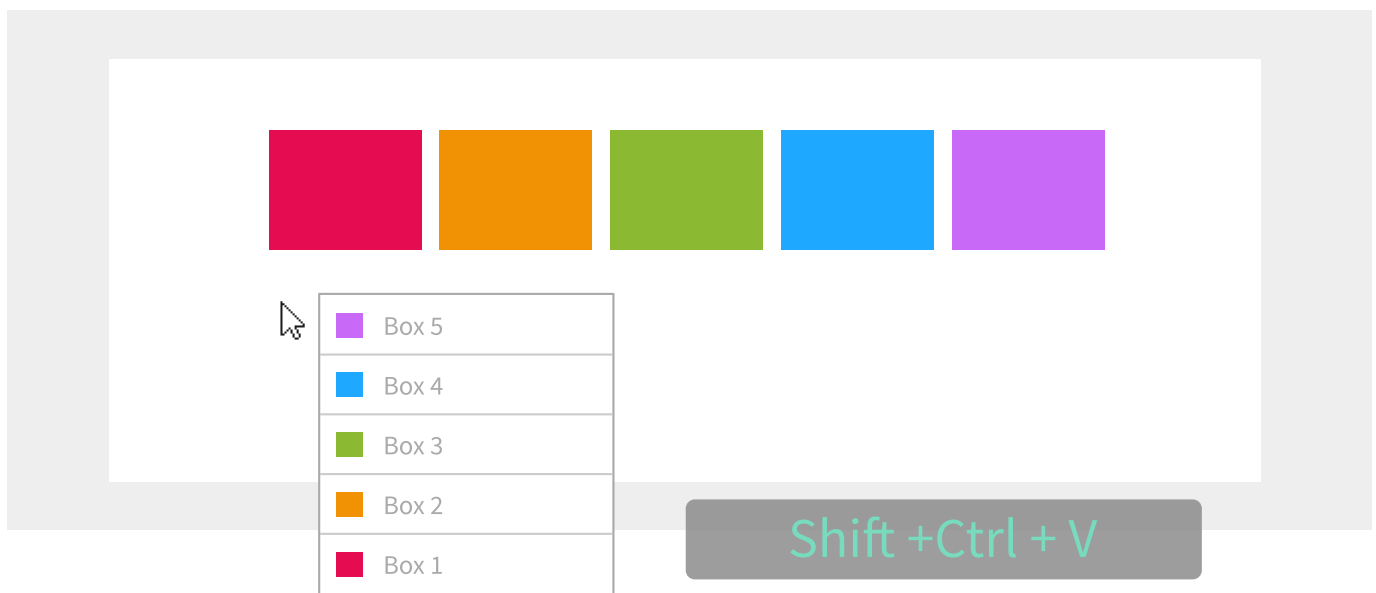

You can press Ctrl + C to copy a shape and Ctrl + V to paste it. What a feature!

Clipboard managment feature

We have improved the copy & paste feature. We have 5 different elements in our canvas (see the example). We fill them in different colors and copy them to the clipboard using the Ctrl + C command.

UXBOX keeps a historical of the last 5 saves you did to the clipboard. So if you need utilize them again in your design you only need to do Shift + Ctrl + V to show the clipboard management tooltip and choose what element do you want to paste. Nice uh?

Click on the tooltip element you want to paste and it will be placed on you canvas
