

## UXBOX drawing tool

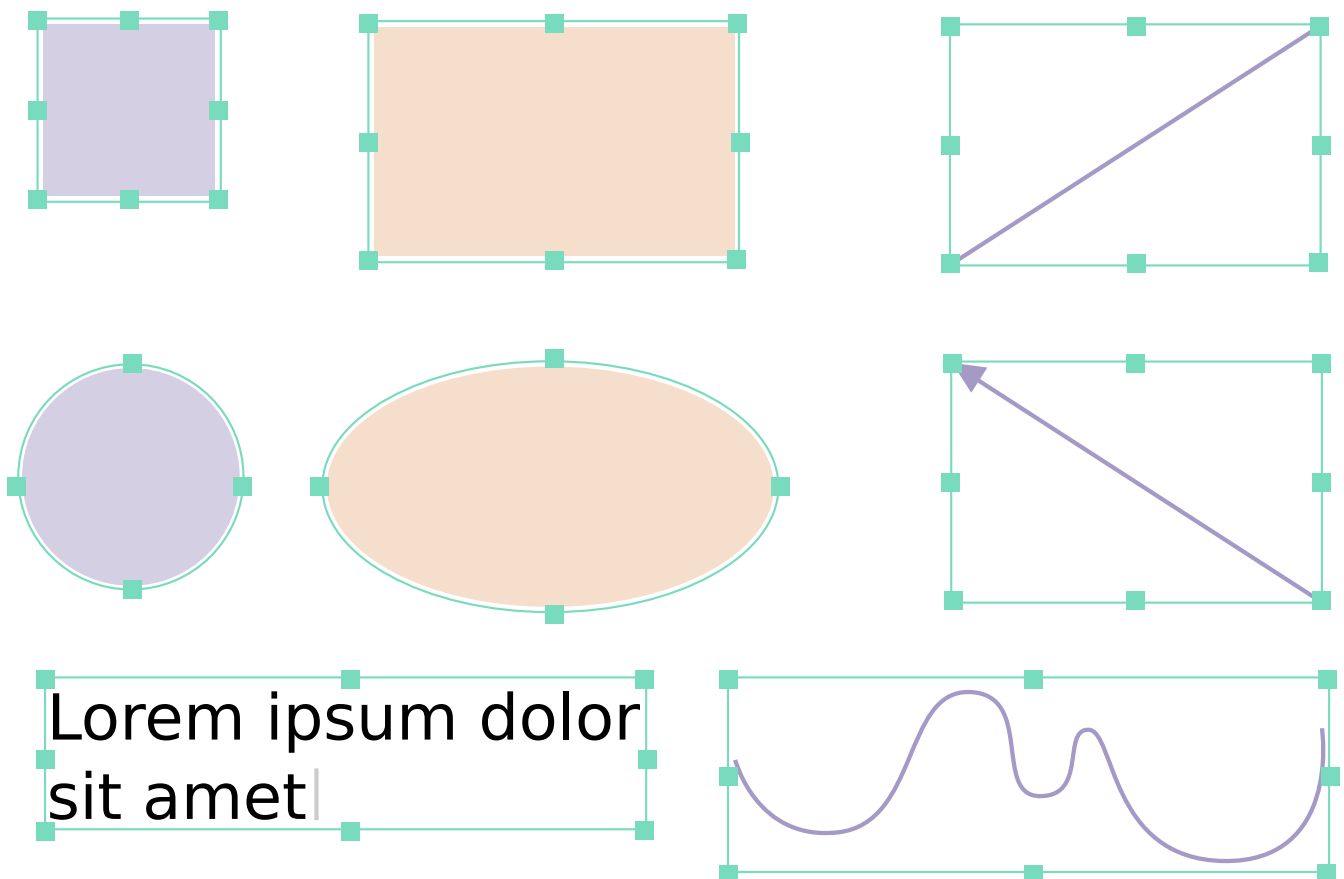

UXBOX drawing tool allows user to create shapes and forms, customize all their settings (color, size, border, ...) and create texts. It is formed by six subtools:

- 1- Box tool
- 2- Circle tool
- 3- Line tool
- 4- Curves (bezier) tool
- 5- Text tool
- 6- Arrow tool

## Shapes and text

With this tools you can create multiple shapes and text to customize your prototypes.

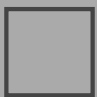

## Customize shapes

When a shape is selected, the customize shape pop-up appears on it's right side with all the available options this shape has. It is formed by 2 elements: the options nav on the left and the settings area on the right.

Each shape has different options based on the shape you have selected. If you select more than one shape (group) the customize shape pop-up shows only the options these shapes have in common to set them at the same time.

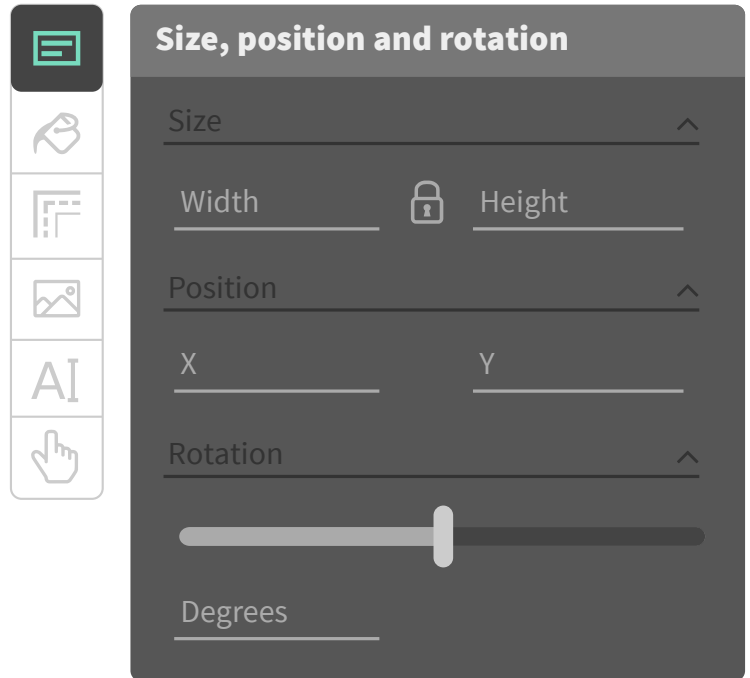

## Customize shapes per tool

	Size, position, rotation	Color, opacity	Border color, width, opacity	Border radius	BG img	Actions (:hover, link, ...)	Text settings
 Box	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	
 Circle	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>		<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	
 Line	<input checked="" type="checkbox"/>		<input checked="" type="checkbox"/>			<input checked="" type="checkbox"/>	
 Curves	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>		<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	
 Text	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>				<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>

## Size, position and rotation

With this option yo can set the position, size and rotation of your shape.

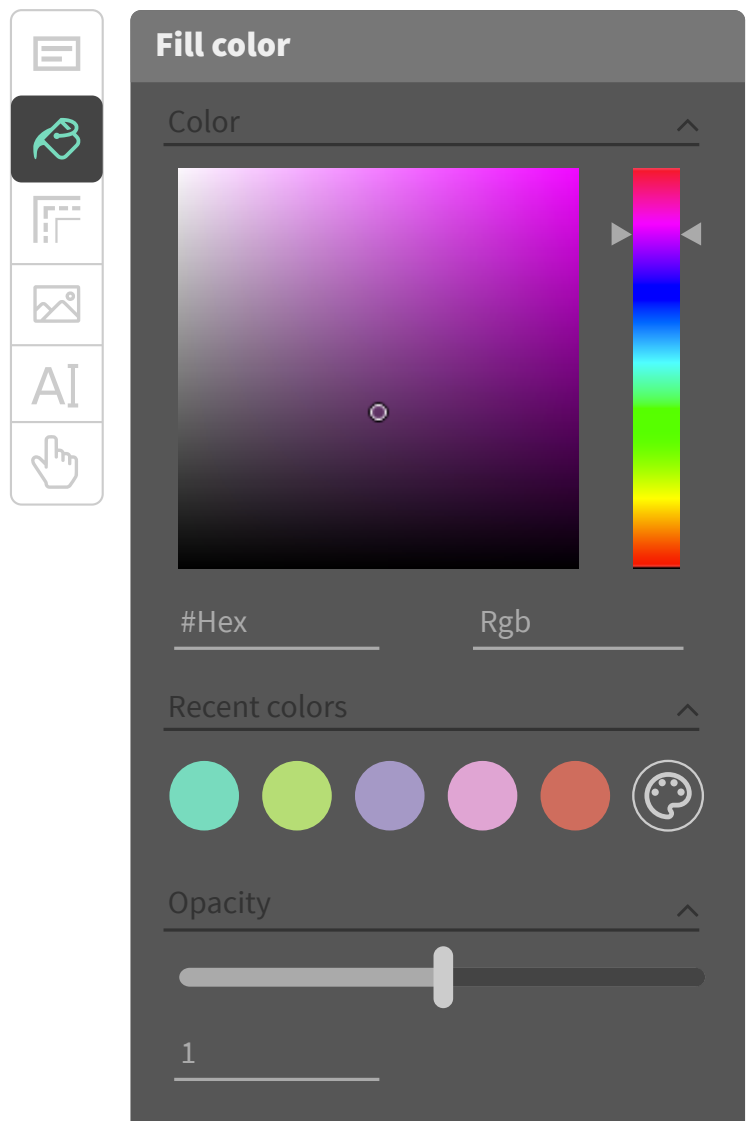

Click on the "lock" icon to make the size proportional and use the handler to rotate the shape easily.

## Fill color

Set the background color of a shape, create and edit color palettes and choose the opacity.

You can use the color picker, hexadecimal or RGB format.

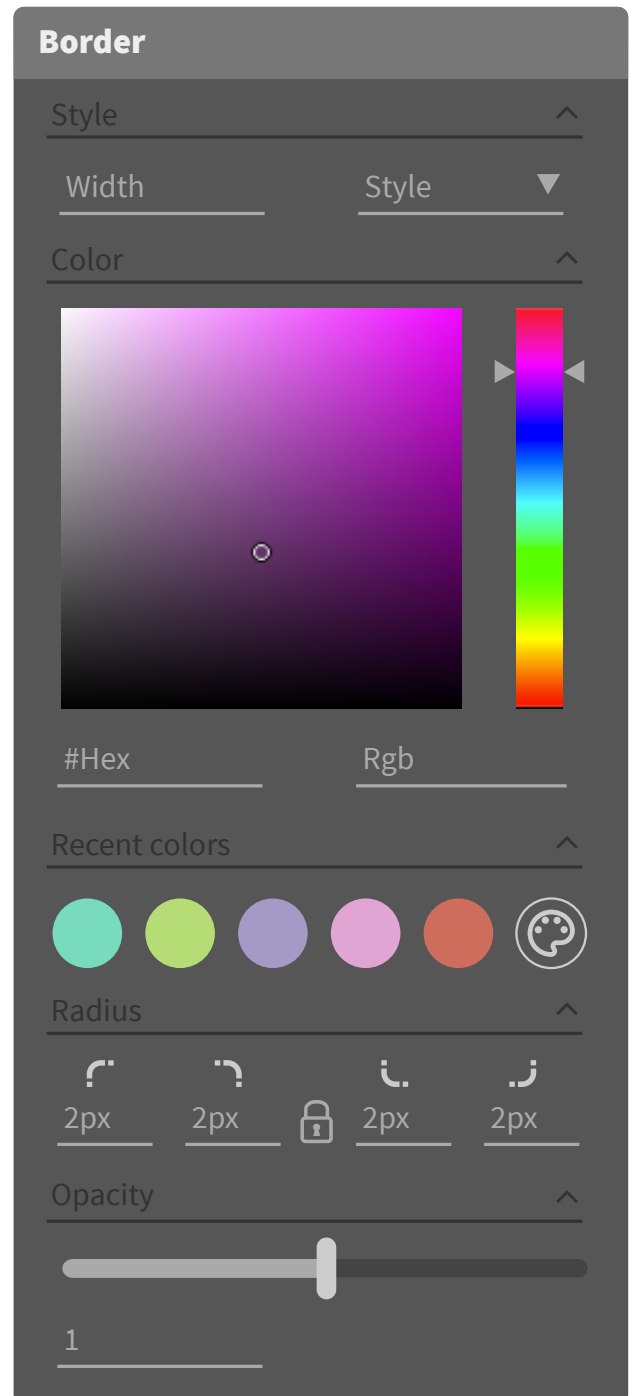

## Border

Set the border width, color and style of a shape. Same color and opacity options than "fill color" tab.

Border style options: dashed, dotted solid, ... (as CSS properties)

Border radius is seted per corner or together.

You can view/edit the color palette too.

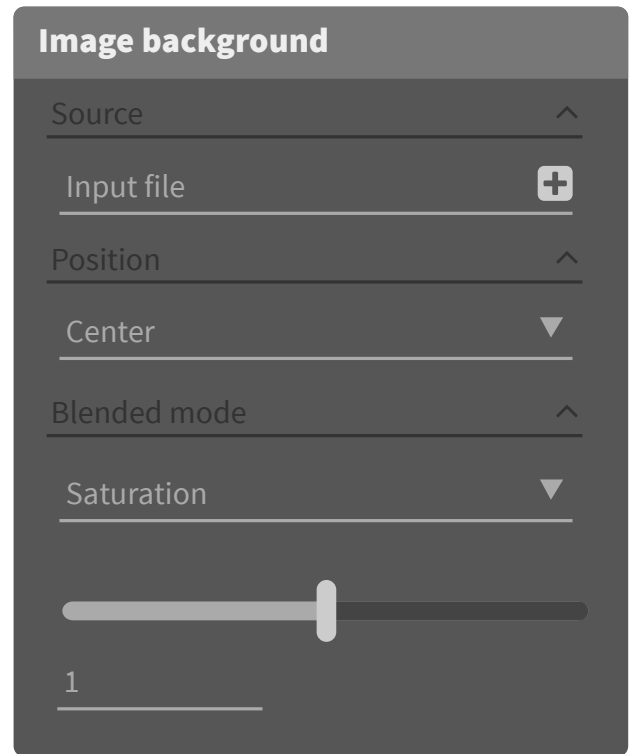

## Image background

Once you select a shape you can set to it an image as background. Upload it with the source input.

You can positioning it inside the shape to the center, left, right, top, bottom and cover. (CSS properties)

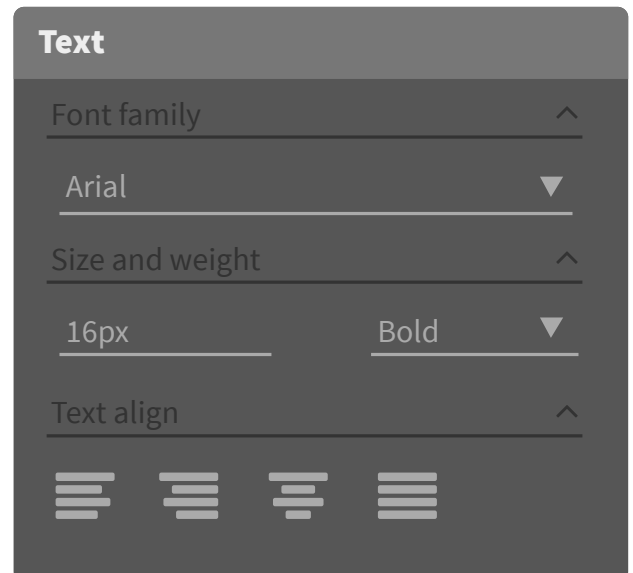

Also you can set a blend mode to it like Saturation, B&W, Contrast, ... (CSS properties)

## Text

You can create a line text or a box text. Set the font famili, size and weight of the text.

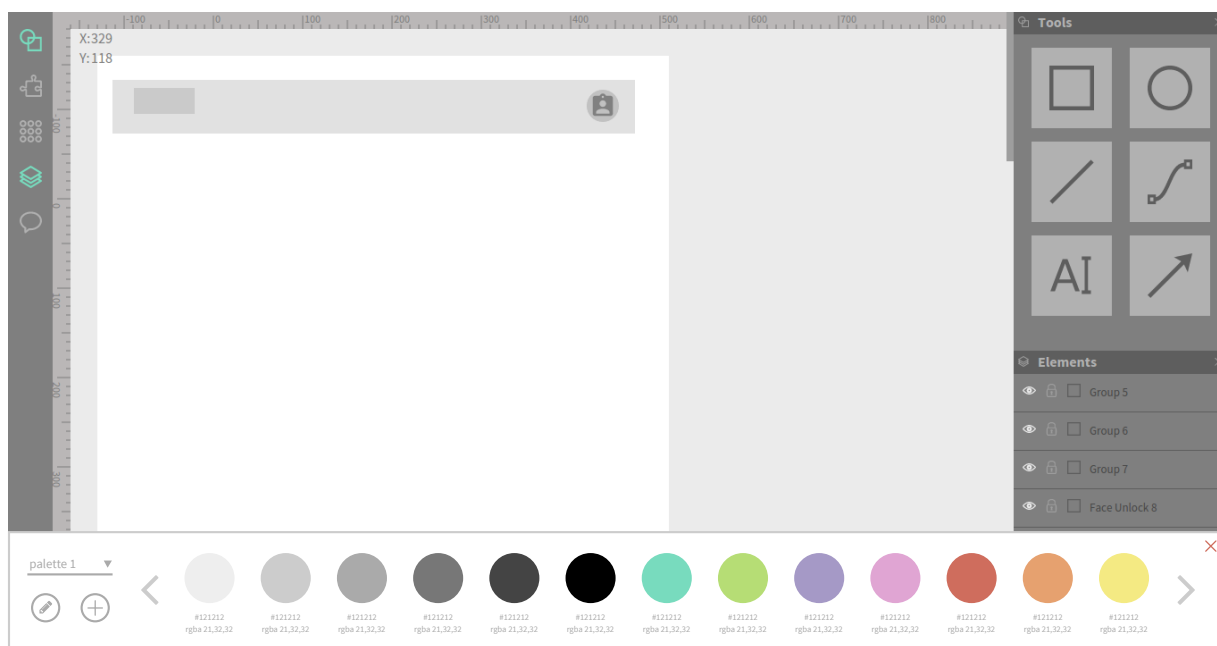

Then you can align the text as you want: Left, right, justify, ...

## Color palette

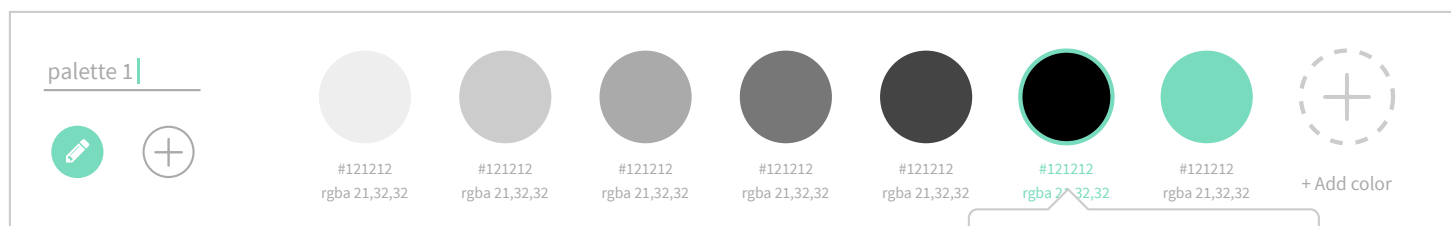

Launch the color palette options tooltip doing click on the palette icon. Then you can select your project color palette or switch to another palette instead.

Also you can create a new color palette from the beginning and save it into your library.

## Edit Color palette

You can edit the current color palette: Change palette title, delete/add colors.

## Create Color palette

Create new color palettes from the beginning. Just choose a title and start adding colors.
