## **Document history**

UXBOX document history is a powerful feature that allows the user to "jump" and do crossworking between the different page versions.

## **How it works**

UXBOX uses a very complex version control that is working during the whole project time. It keep versions of your design changes per page so you could go backward and forward this versions at any time. Nothing will be lost!

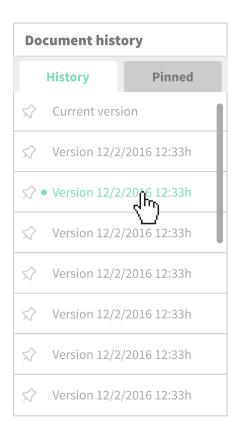

## How to use it

It work in background so you have to do nothing. Click on the document history icon only when you need to go back on your steps.

The complete history will appear on the left side of the screen. Select the version of your choice having in mind the version data you will see. Once selected, your design changes of this version will appear at the canvas.

Swap between versions to recover the work you lost or the changes you want preserve.

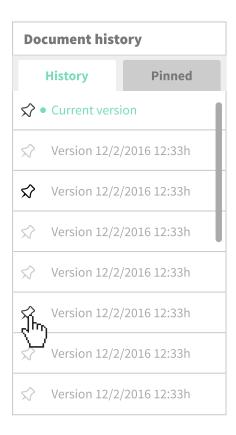

## **Pinned versions**

If you want to save any of the history versions as a checkpoint you only have to click on the "pin" icon to do it.

The document history have to sections: the complete history and the pinned versions.

Pin whatever version you need to go back to work and they will be saved at the "pinned" section.

There you will have all the pinned versions so it's easy to select them. You can rename these versions or remove them from the list.
