Groups & layers in UXBOX

Groups and layers are a standard functionality easy to use. At the "Layers" window you can edit, delete, group and order the shapes. As soon as you create a shape like a box, a circle, a line, ... it will be represented at the layers window.
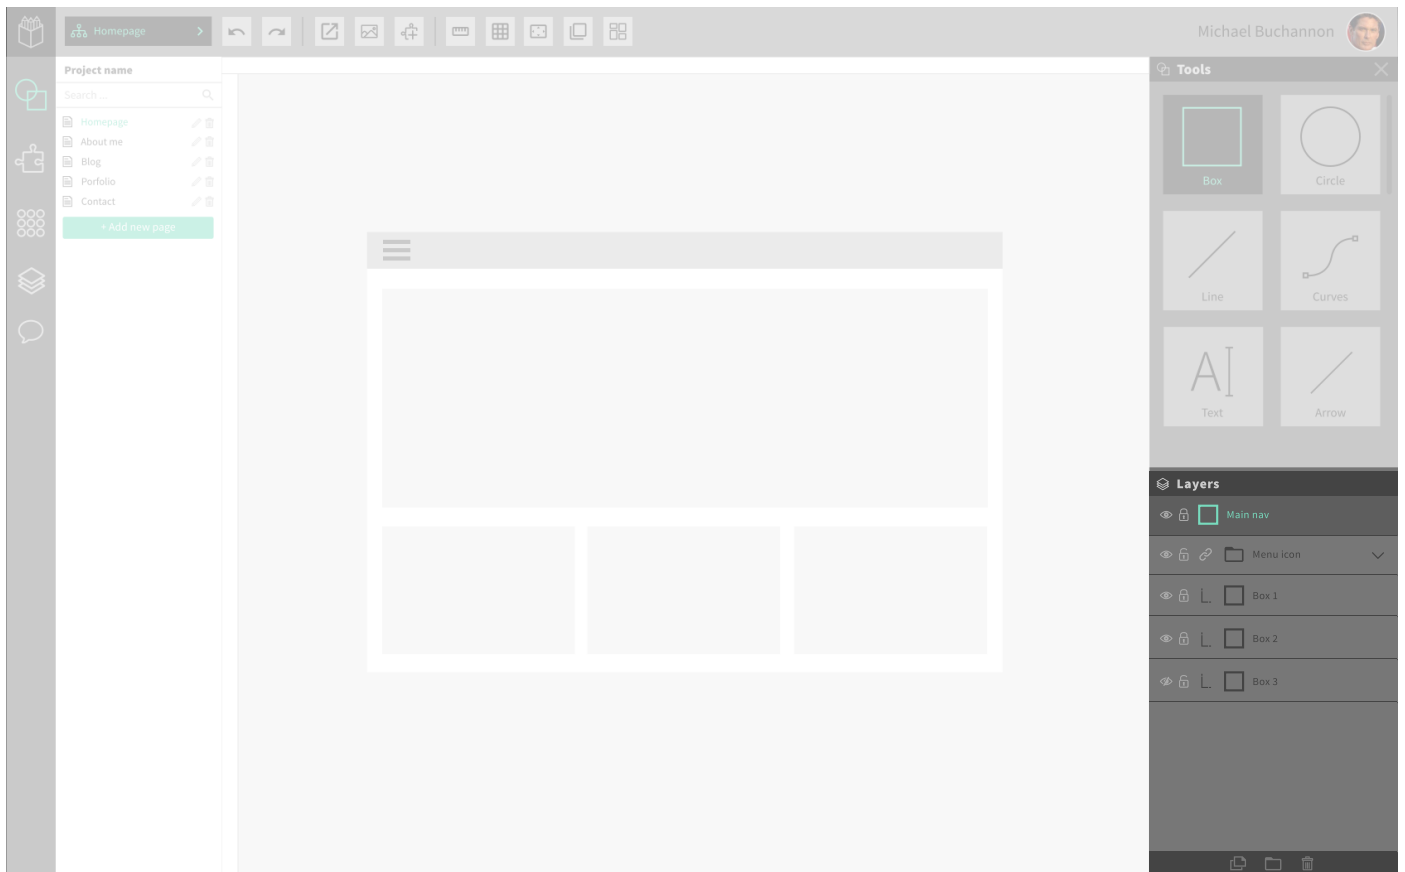

👁 Show/hide current shape or group

🔒 Lock/unlock current shape or group

🔗 Link all the group content to interact with it

∟ Indicates an element inside a group

⌄ Show/hide group content

📁 Group/ungroup selected shapes

🗐 Duplicate shape or group

🗑 Delete shape or group
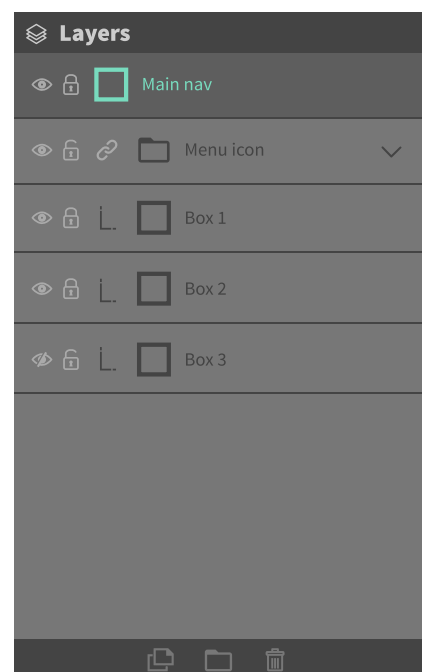

You can organize a shape/group order by drag & drop them in the layers window.

Also you can rename the shapes/ groups. Do mouseover on the name and change it.

Drag & Drop

A green line allows you to organize the current shape above or below one shape of the list
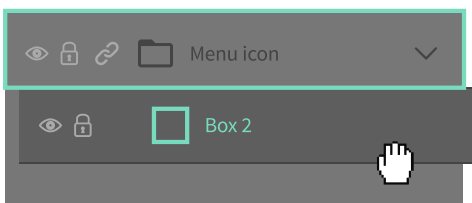

A green border box allows you to organize the current shape inside a group

At the bottom of the layers window you have an interaction bar with 3 options: duplicate, group/ungroup an delete shapes/groups.

Click on the toggle icon to show the shapes/groups inside the group.

Groups allows you to move, align and organize multiple shapes together.
